

"Learning Tubs"

An easy way to organize individualized instruction

Directions:

1. Purchase a medium size plastic storage container with lid. I recommend a clear, sweater size container
2. At the top of an index card write one objective (i.e. recognize numerals 1-20). Under the objective write the names of all students who need to work on that objective. Cards may include objectives that have not yet been mastered as well as those that will challenge students. Prepare as many cards as skills to which you wish to concentrate.
3. For each objective, select learning activities (games, flash cards, file folder games, etc) and label each activity by objective for quick identification.
4. Place activities and index cards inside the storage container.
5. When you, your teacher assistant, or a parent volunteer are preparing to work with individuals or small groups, simply select an index card and related learning activity from the "Learning Tub". "Learning Tubs" can quickly and easily be changed as students' needs change!
